## IN THE CLAIMS

- 1. (Original) A process for the preparation of a low contact resistance contact on a high transition temperature superconductor which comprises making a groove at the end of the superconductor, depositing a first silver layer by metal spray gun at a temperature 120°C, heating the said deposited silver layer at a temperature in a range of 200 250°C for a time period in the range of 2-5 hrs, wrapping a perforated silver foil on the said heat treated first silver layer, depositing a second silver layer by metal spray gun at a temperature of 120°C, heating the said combination of first silver layer, wrapped perforated silver foil and second silver layer at a temperature in a range of 830 850°C in air for a time period in the range of 100 150 hrs resulting in a joint with the superconductor.
- 2. (Original) A process as claimed in claim 1, wherein the high transition temperature superconductor is a hollow cylindrical tube of length in a range of 200 305mms.
- 3. (Original) A process as claimed in claim 2, wherein wall thickness of the tube is in a range of 1 3mms.
- 4. (Original) A process as claimed in claim 2, wherein outer diameter of the tube is in the range of 10 20 mms.
- 5. (Original) A process as claimed in claim 1, wherein high transition temperature superconductor is a solid rod of length in a range of 200-305 mms.
- 6. (Currently Amended) A process as claimed in claims 1 =5, wherein the high transition temperature superconductor is pure (BiPb)<sub>2</sub> Sr<sub>2</sub> Ca<sub>2</sub> Cu<sub>3</sub>O<sub>10+x</sub>.

- 7. (Currently Amended) A process as claimed in claims 1 =5, wherein the high transition temperature superconductor is  $(BiPb)_2 Sr_2 Ca_2 Cu_3O_{10+x}$  with 10% silver.
- 8. (Original) A contact when made by the process of claim 1, wherein the contact resistance is in a range of  $3.07 \times 10^{-6}$  to  $3.0 \times 10^{-7} \Omega$  in zero applied magnetic field at 77K.
- 9. (Original) Contact as claimed in claim 8, wherein the contact resistance is in a range of 1.5 x  $10^{-8}$  to 8.5 x  $10^{-8}$   $\Omega$  in zero applied magnetic field at 4.2K
